

Yes. This message simply appears because we have not obtained a Digital Certificate. Since the application has been originally compiled with the MIDP 1.0 library, MIDP 1.0 phones will not complain about this. However, MIDP 2.0 phones will complain about this but clicking "continue" will ignore the message. The application itself is otherwise completely safe to install. This message only appears because it doesn't recognize the 'security domain' of the application.
